[Tech Thoughts Daily Net News – February 6, 2014](#)

Winter Olympic Games in Sochi.³³ Such surveillance technology has been used for political purposes in the past, including the targeting of opposition leaders. In a Supreme Court case in November 2012 involving Maxim Petlin, an opposition leader in the city of Yekaterinburg, the court upheld the government's right to eavesdrop on Petlin's phone conversations because he had taken part in so-called "extremist activities," namely antigovernment protests.

Online surveillance represents somewhat less of a threat in the major cities of Moscow and Saint Petersburg than in the regions, where almost every significant blog or forum is monitored by the local police and prosecutor's office. Most of the harassment suffered by critical bloggers and other online activists in Russia occurs in the regions.

Under current legislation, in order to receive an operating license, ISPs are required to install equipment that allows security services to monitor internet traffic. ISPs that do not comply with SORM system requirements are promptly fined, and may have their license revoked if problems persist. Russian authorities are technically required to obtain a court order before accessing an individual's electronic communications data; however, the authorities are not required to show the warrant to ISPs or telecom providers, and FSB officers have direct access to operators' servers through local control centers. At the same time, experts note that there is no information about government efforts to bring to account security officers who abuse tracking methods.³⁴ ISPs and mobile operators are required to provide network access to law enforcement agencies in conducting search operations, as well as provide other information requested by the prosecutor's office, the Interior Ministry, the FSB and the Investigative Committee.

In addition to surveillance, violence against online journalists escalated over the past year. There were at least 24 cases of violence or threats documented in 2013.³⁵ On July 9, 2013, Akhmednabi Akhmednabiyev, a journalist for the online news site *Caucasian Knot* and the deputy editor of the independent news outlet *Novoye Delo*, was shot outside of his house in Dagestan. Colleagues believe the murder was politically motivated, given that Akhmednabiyev frequently reported on sensitive topics such as government corruption, arbitrary detentions, and protests.³⁶ Akhmednabiyev had survived a previous assassination attempt six months earlier.

There has also been an increase in the number of cyberattacks on independent media, blogs, and news portals. Websites that suffered DDoS attacks include the internet project *Demokratia.ru*, Saint Petersburg news portals *Zaks.ru* and *Lenizdat.ru*, the website of the Sova Center for Information and Analysis, the website of the daily newspaper *Moskovsky Komsomolets*, the Murmansk-based portal *Bluger51.ru*, and the websites of *Novaya Gazeta* and the TV channel *Dozhd*.

According to a Kaspersky Lab report, 2013 was marked by a 20-fold increase in power of DDoS attacks in the Russian online sphere (RuNet). The most powerful attack to date was organized against the website of *Novaya Gazeta* and amounted to 60 Gbps, compared to the maximum attack
